Science Fair Exhibition Project

Purpose

The purpose of the Science Fair Exhibition Project (SFEP) is to encourage students to research science topics of interest and communicate the results of that research in an original research paper.

Topic Selection

The student will choose a topic based on his or her individual interest. The student and science teacher will cooperatively determine which science fair option would best represent that topic. The SFEP option is best for those topics that cannot feasibly be explored through experimentation or problem solving, such as black holes.

References

The student must use four independent references for research. References may include library books, journal articles, newspaper articles, and valid internet material. These references must be presented as a bibliography to the science teacher on or before _________________.

SFEP Paper

The student will compose an original five paragraph research paper on his or her topic. The student must use his or her own words to present findings. Plagiarism of any kind will not be tolerated. Direct quotations may be used if they are properly noted.

SFEP Paper Outline

The following research paper outline must be used. The completed outline is due on _________________.
